Face analysis

AWS rekognition can analyse facial features of the person who's picture was uploaded.

Facial analysis

Get a complete analysis of facial attributes, including confidence scores. [Learn more](#)

[Leave us feedback](#)

The interface displays a large image of a woman's face with a red bounding box. Below the image are two options: 'Choose a sample image' and 'Use your own image' with an 'Upload or drag and drop' button. To the right, the 'Results' section shows a small thumbnail of the face and a list of attributes with confidence scores.

Attribute	Confidence Score
looks like a face	99.9 %
appears to be female	99.9 %
age range	18 - 22 years old
smiling	92.5 %
appears to be happy	61.9 %
not wearing glasses	99.9 %

PPE detection

AWS rekognition can identify the PPE (personal protective equipment) present in the picture.

Summarisation inputs

Provide the following required PPE and required minimum confidence threshold inputs to get an identifier summary of persons with required PPE, without required PPE and indeterminate.

Required PPE: ☒ Face cover ☐ Hand cover ☐ Head cover

Required minimum confidence: 80% ▼

Face cover on nose : True	94.9 %
Head detected	99.9 %

VIDEOS:

Sorted video analysis

AWS rekognition can identify the objects present in the video which is uploaded and you can also look up for an object which is present in the video by selecting the object and the highlighted part will represent that , that object was present there in that frame and at that time line.

The screenshot displays the AWS Rekognition console interface for video analysis. At the top, a 'results' header indicates that 41 results were found, sorted by category. Below this, four tabs are visible: 'All results' (41), 'Celebrities' (2), 'Objects and activities' (39), and 'Moderated labels' (0). The 'All results' tab is currently selected. On the left side, there is a search bar with the placeholder text 'Find' and a 'Select all' toggle. Below the search bar, the 'Celebrities' section is expanded, showing two portrait images of men. The 'Objects and activities' section is also expanded, displaying a grid of labels such as 'Adult', 'Male', 'Man', 'Person', 'Face', 'Head', 'Clothing', 'Crowd', 'Coat', 'People', 'Formal Wear', 'Suit', 'Press Conference', 'Accessories', 'Blazer', 'Computer Hardware', 'Electronics', 'Hardware', 'Jacket', 'Monitor', 'Photography', 'Portrait', 'Screen', and 'TV'. A 'Show more' link is present below the grid. The 'Moderated labels' section is collapsed. On the right side, a video player is shown with a timeline from 0:00 to 0:19. The video frame displays a man in a suit, identified as Jeff Bezos, against a background of orange and yellow lights. The video player includes standard controls like play, pause, and volume.

Streaming video analysis

AWS rekognition can also identify a person and objects on live straming videos.

Streaming video events
